

“Putting **Wi-Fi** in schools; allowing **cordless phones** that radiate constantly to be manufactured; placing **wireless baby monitors** near an infant; using a **wireless tablet, smart phone** or **computer** while pregnant; holding a **cell phone** next to the head and keeping a cell phone in a bra or hip pocket or under a pillow; placing **cell phone antennas** near homes, schools and on hospitals; metering electricity, water and gas with **wireless smart meters** and designing **smart appliances** for the home will be viewed by future generations as **dumb technology** generated by **greed** for a population that is largely ignorant of the consequences. We need to protect the health and wellbeing of future generations, because without them there is no future! If we don't do it . . . who will?” Dr Magda Havas, PhD, Environmental and Resource Studies, Centre for Health Studies, Trent University, Canada. www.emfscientist.org

Did you know?

EMF and Cancer

In his 1990 book *Cross Currents: The Promise of Electromedicine, the Perils of Electropollution* Robert O. Becker, MD, reported on a study by doctors Jerry Phillips and Wendell Winters. He comments: *At this time, the scientific evidence is absolutely conclusive: 60-Hz magnetic fields cause human cancer cells to permanently increase their rate of growth by as much as 1600 percent and to develop more malignant characteristics.* Becker adds: *These results indicate that power-frequency fields are cancer promoters - that is, they promote the growth of human cancers... The promoting effect speeds up the clinical course of any established cancer and makes it that much more difficult to treat.* He further states: *it is quite possible that chronic exposure to such fields is a competent cause for the origin of cancers.*

Note: Further research suggests that ‘dirty electricity’ (unwanted and undesirable radiowaves riding along potentially all electrical wiring) is a factor.

SUGGESTION: Eliminate EMF as much as possible from your life

Becker, Robert O., MD, *Cross Currents: The Promise of Electromedicine, the Perils of Electropollution*, Tarcher, New York, 1990, p 206 and p 215
