

“Putting **Wi-Fi** in schools; allowing **cordless phones** that radiate constantly to be manufactured; placing **wireless baby monitors** near an infant; using a **wireless tablet, smart phone** or **computer** while pregnant; holding a **cell phone** next to the head and keeping a cell phone in a bra or hip pocket or under a pillow; placing **cell phone antennas** near homes, schools and on hospitals; metering electricity, water and gas with **wireless smart meters** and designing **smart appliances** for the home will be viewed by future generations as **dumb technology** generated by **greed** for a population that is largely ignorant of the consequences. We need to protect the health and wellbeing of future generations, because without them there is no future! If we don't do it . . . who will?” Dr Magda Havas, PhD, Environmental and Resource Studies, Centre for Health Studies, Trent University, Canada. www.emfscientist.org

Did you know?

What is more Dangerous, Cellphones or X-rays?

There is compelling evidence showing cellphones are more dangerous than X-rays – by several orders of magnitude.

Some of the best evidence comes from a German study (headed by Professor Franz Adlkofer) in which the effects of ionizing radiation equivalent to 1600 chest X-rays were compared to 24 hours on a cellphone. Surprisingly, they found both produced roughly equivalent amounts of DNA breaks in in-vitro assays.

According to Martin Pall PhD, this actually vastly underestimates the effects of cellphones, because they used a continuous wave EMF, not pulsed.

SUGGESTION: Never place a mobile phone against your head or on your body
