

“Putting **Wi-Fi** in schools; allowing **cordless phones** that radiate constantly to be manufactured; placing **wireless baby monitors** near an infant; using a **wireless tablet, smart phone** or **computer** while pregnant; holding a **cell phone** next to the head and keeping a cell phone in a bra or hip pocket or under a pillow; placing **cell phone antennas** near homes, schools and on hospitals; metering electricity, water and gas with **wireless smart meters** and designing **smart appliances** for the home will be viewed by future generations as **dumb technology** generated by **greed** for a population that is largely ignorant of the consequences. We need to protect the health and wellbeing of future generations, because without them there is no future! If we don't do it . . . who will?” Dr Magda Havas, PhD, Environmental and Resource Studies, Centre for Health Studies, Trent University, Canada. [www.emfscientist.org](http://www.emfscientist.org)

## Did you know?

### Dirty Electricity and Wireless Devices

From when electricity was first introduced in the 1880s, radio waves have been riding along electrical wiring, throughout homes and buildings and along the grid. This was not known until the 1980s. These unwanted and undesirable radio waves are called ‘dirty electricity’ by scientists and ‘dirty power’ by the power industry. When energy-efficient devices were developed in the 1970s, levels of ‘dirty electricity’ increased, running parallel with increased cancer rates. In the 1980s mobile phones were introduced with Wi-Fi following in the 1990s.

All wireless communication devices put out polarized EMF that carries information via pulsations. Both the pulsations and the polarization make EMF much more biologically active.

**SUGGESTION:** Eliminate EMF as much as possible from your life
