

“Putting **Wi-Fi** in schools; allowing **cordless phones** that radiate constantly to be manufactured; placing **wireless baby monitors** near an infant; using a **wireless tablet, smart phone** or **computer** while pregnant; holding a **cell phone** next to the head and keeping a cell phone in a bra or hip pocket or under a pillow; placing **cell phone antennas** near homes, schools and on hospitals; metering electricity, water and gas with **wireless smart meters** and designing **smart appliances** for the home will be viewed by future generations as **dumb technology** generated by **greed** for a population that is largely ignorant of the consequences. We need to protect the health and wellbeing of future generations, because without them there is no future! If we don't do it . . . who will?” Dr Magda Havas, PhD, Environmental and Resource Studies, Centre for Health Studies, Trent University, Canada. www.emfscientist.org

Did you know?

Wi-Fi, Cordless Phones, Mobile Phones, Mobile Phone Towers and other sources

Children are not little adults. Children's skulls are thinner and tissues of a child's head, including the bone marrow and the eye, absorb significantly more energy than those in an adult head. It is scientifically accepted that children are more vulnerable to the biological effects of microwave exposure (RF EMF) than adults due their rapidly developing body systems. Children's stem cells are more affected by microwave radiation.

SUGGESTION: Use hard-wired technology or if it is not possible, limit Wi-Fi and exposure to other EMF emitting devices

EMF PROTECTION PROJECT
